

User feature feedback:

- search function that filters posts (!!!)
- small screen scrolling: figured out
- faster loading for images
- section at the top that shows what's hot this week
- map feature to quickly see places and save them on google maps

Features to develop

- Main page UI, padding between posts, masonry grid
- Post page small screen, universal scrolling
- Swipe between posts without exiting
- Optimization: cache the data (less expensive ways to load data)
- Add authentication, backend access/security
- User analytics
- User authentication
- Separate page for posts that were liked
- Being able to post on the website
- Search feature for posts

Tasks for this week:

- Padding for posts, masonry grid (Aditi)
- Data caching and optimization methods (Stella)
 - o removing img tags, Image tag instead from next.js
 - o Research on other optimization methods
 - o Try global.css, tailwind (last priority)
- User authentication (Sid)
- Small screen scrolling (Stella)
- UI for login and profile page (Aditi)
- Search bar and implementation (Sid)

Next meeting?
