

Features to think about:

- Comment section
- User ID
- Interactive like count
- Tools to come up with posts (create post page): formatting, uploading photos
- Filters for events to tie posts towards (location, date, title)
- Search bar
- Attributes that classify events

Priority:

- Update logo and name, database names
- Responsiveness of screens (!!!) (post-component)
- Live number of likes (counting requests, trying race conditions SQL, keeping track of who has already liked it) (post-component)
- Managing traffic, anything on optimizing in supabase (fine for 10,000), reading docs (post-component)
- Main page UI (main-page)

Set practices:

- Naming conventions for branches (work on same branch for the same component)
 - o main-page
 - o event-page
 - o card-component
 - o header-component
 - o post-component
- Push convention:
 - o Pushing after every work session (preferably if everything is working)
 - o Try to be clear about what was changed

Next meeting: July 2nd, 8pm
