

List of potential product features:

- Front page: Post panels (4 columns of rectangles; with image and text)
- Recommendation based on similar events (NLP?) within the post page
- Search and filter post by tags on metadata (time, place, dating vs. single)
- Itinerary for people to add events to
- Integrated ticketing system
- Like, share, comment on post
- Content (hand-written): one specific category of events

What can we accomplish in three weeks?

- UI design (front page): one with search bar, one without (Aditi)
- Routes for pages: pop-up within the same page for post page (Sid)
- Set up backend database (supabase) with placeholder text and image (Richard)
- Generating post content, UI design (post page) (Stella)

1. Front page: post panels (manually update them)

- a. Title
- b. Image
- c. Column structure

2. Post page (the post itself)

- a. Image on the left
- b. Text on the right (with emojis)
- c. Like button, "I'm going to" button (would it be possible for event digest?)

3. Content for post: 2 posts a week
